#### DETAILED ACTION

#### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1 and 3-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Itoh et al (US Patent Number 5280464) in view of Shikama et al (US Patent Number 4789978).

In regards to claims 1, 3 and 4, Itoh et al discloses an optical pickup, apparatus and method for applying optical beams to an optical disk (Fig. 1), comprising: a collimate lens (Fig. 1, element 80) configured to collimate optical beams outputted from a light source to parallel light (Column 2, lines 53-55); and an objective lens (Fig. 1, element 20) configured to collect the optical beams transferred to parallel light by the collimate lens (Fig. 1, element 10 changes light to parallel to the objective lens) and applying the beams to the optical disk, wherein mounting angles of the collimate lens and the objective lens configured such that a 0 degree direction astigmatism of the collimate lens and a 0 degree direction astigmatism of the objective lens offset by each other (Column 2, lines 64-68 and Column 3, lines 1-8) and a 45 degree direction astigmatism of the collimate lens and a 45 degree direction astigmatism of the objective lens may be offset by each other (Column 3, lines 59-67). However, Itoh et al does not

disclose wherein the collimate lens and the objective lens include gates from resin injection, the gates being reference position for adjusting the mounting angles.

In the same field of endeavor, Shikama et al discloses wherein the collimate lens and the objective lens include gates from resin injection, the gates being reference position for adjusting the mounting angles (Column 4, lines 10-29, plastic material is a resin). At the time of the invention it would have been obvious to a person of ordinary skill in the art to modify the apparatus Itoh et al have the resin to adjust the angles of the lens as suggested by Shikama et al. The motivation is to adjust the lens angle to reduce astigmatism.

In regards to claim 5, Itoh et al does not but Shikama et al discloses the optical pickup according to claim 4, wherein the adjusting includes rotating one of the collimate lens and the objective lens around an axis parallel to the optical beams (Column 3, lines 1-7). The motivation is the same as claim 1 above.

### Response to Arguments

Applicant's arguments with respect to claims 1, 3, 4, and 5 have been considered but are moot in view of the new ground(s) of rejection.

#### Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP
